

First Occurrence of Aquifer Materials in Clark County, South Dakota

State of South Dakota
William J. Janklow, Governor

South Dakota Geological Survey
Dennis L. Bies, State Geologist

Explanation

This map is intended for use as a tool to aid in identifying areas underlain by aquifer material. The aquifer materials shown on this map are categorized below. This map does not show individual aquifers. There may be more than one type of aquifer material present in an area. However, only the aquifer material that would be first encountered is shown. Within the boundaries of any given map unit, there may be localized areas where aquifer material is absent. The thickness and permeability of aquifer material may vary significantly. Also, no attempt was made to distinguish between saturated and unsaturated material. Therefore, not all of the areas defined on this map may be an aquifer. Site-specific information should always be examined when making land management or water development decisions.

First occurrence is generally less than or equal to 50 feet below land surface

- Alluvium:** Consists of clay and silt with minor amounts of sand and gravel.
- Sand and Gravel:** First occurrence is generally at land surface.
- Sand and Gravel:** First occurrence is generally below land surface. May not be uniform in depth and thickness and may be discontinuous in lateral extent.

First occurrence is generally greater than 50 feet and less than or equal to 100 feet below land surface

- Sand and Gravel:** May not be uniform in depth and thickness and may be discontinuous in lateral extent.

First occurrence is generally greater than 100 feet below land surface

- Sand and Gravel:** May not be uniform in depth and thickness and may be discontinuous in lateral extent.
- Dakota Formation:** Consists of interbedded siltstone, sandstone, and shale.

- Major highway
- Road
- Township boundary

- River or stream
- Lake
- Slough or intermittent lake

For township section numbering system, see T. 113 N., R. 58 W.

This map was developed from hydrologic logs and published reports. The major sources of information were:

- Christensen, C.M., 1987, *Geology and water resources of Clark County, South Dakota*. Part I: *Geology*. South Dakota Geological Survey Bulletin 29, 39 p.
- Henderson, L.J., 1978, *Mineral resources of Clark County, South Dakota*. South Dakota Geological Survey Information Pamphlet 16, 9 p.
- _____, 1985, *Geology and water resources of Clark County, South Dakota*. Part II: *Water resources*. South Dakota Geological Survey Bulletin 29, 62 p.
- Schneider, W., 1977, *Sand and gravel resources of Clark County, South Dakota*. South Dakota Geological Survey Information Pamphlet 15, 31 p.
- South Dakota Geological Survey, *Hydrologic logs database*.

The Geological Survey, Department of Environment and Natural Resources, engages in an ongoing data collection and interpretation process. An outcome of that process is to reflect those interpretations as maps such as this one. Reasonable efforts have been made to ensure that this map accurately reflects the source data used in its preparation. This map is site specific. As additional data become available, geologic interpretations may be revised and the map may be updated by the Geological Survey. This map should not be enlarged or otherwise used in an attempt to interpret more detailed data can be seen at the 1:100,000 scale.

Index map of South Dakota showing the location of Clark County
