

2009:

Grassland team determined native grass varieties

TC pipeline construction

9-30-09 Reclamation and seeding of native grass

2010: Easement area full of weeds not much grass growing. TC sprayed the easement area.

August 2011:

TC was back to do total reclamation on the mile and a quarter easement area.

The crew was here for about two weeks.

Native grass was once again reseeded (wrong seed mixture was planted in 2009)

ROW ridges were leveled off, the ground cracks – areas were deep ripped to fill voids and leveled.

The 2009 signed TC construction agreement – all rock was to be hauled away.

Michels Construction pushed and buried the rocks into the easement area during construction.

August 2011- 75 ton of rock was hauled off easement area.

September 25, 2012

TC is back again to do some more reclamation. The easement area by the county road is now dry enough to work on the land. Mowing, dirt work and native grass reseeding is in the plan. The 80 acres will be reseeded over top of the grass seed planted in 2011. There is little native grass growing in the easement area. The crop ground showed loss of crop again.

August 28, 2013

Frank Maddox and Eric Munz looked at easement area. The thickspike wheat grass is becoming more of a problem. Very little if any other native grass growing.

May 21 2014

Easement area sprayed with roundup and area mowed. Frank has had trouble trying to get rid of the thickspike wheat grass using spray. Area had to be sprayed twice.

August 19, 2014

Winds were 10-20 from the south. Sunny

Easement area replanted with native grass mixture-have a tag.
