Hi Bleau,

Understood. While we are working on assembling that information, could you please confirm that the format of the Excel spreadsheet John sent will meet the needs of your external modeling group? If not, please let us know what format you need. In the meantime, could you please send us over NWE's standard NDA? We want to make sure this information is kept confidential. If you'd prefer, we can send our standard mutual NDA as well. Please advise. Thanks in advance!

Best Regards,

**Corey Juhl**

Our preference would be an 8760 calculated output for three years based on the actual wind speeds measured for the last three years measurements that have been taken from each site.

Hi Bleau -

Corey is traveling today and wanted me to forward you the attached SAMPLE file (from a previous project) to make sure the format would work for NWE. The file includes both 12x24 and 8760 expected farm output.

If you could please confirm the format is acceptable (or not w/ changes required), we'll have our wind assessment guys put the file(s) together for all sites.

Thanks.

John
