

All Swiftel-originated toll calls are routed through the SDN network to the various IXC networks.

Most Sprint-originated toll calls are routed directly to Sprint's IXC network; incidental calls directed to another IXC (e.g. 800, 1010XXX) are routed to SDN. **No change to Swiftel-originated toll call routing.**

Swiftel incorrectly assumes Swiftel-originated toll calls (to the Sprint IXC) must be routed over the Local Interconnection Facilities, bypassing the SDN network.
